SERVICE MANUAL

US Model
Canadian Model
AEP Model
UK Model
E Model
Australian Model
Tourist Model

Model Name Using Similar Mechanism	D-232/235
CD Mechanism Type	KSM-331CAN (S)
Optical Pick-up Name	KSS-331C

SPECIFICATIONS

System
Compact disc digital audio system
Laser diode properties
Material: GaAlAs
Wavelength: λ = 780 nm
Emission duration: Continuous
Laser output: Less than 44.6 μW (measured at 200 mm away from the objective lens surface)
Error correction
Sony Super Strategy Cross Interleave Reed Solomon Code
D-A conversion
1-bit quartz time-axis control
Frequency response
20 - 20,000 Hz $^{+1}_{-2}$dB (measured by EIAJ CP-307)
Output (at 4.5 V input level)
Headphones (stereo minijack)
15 mW + 15 mW at 16 ohms
Line output (stereo minijack)
Output level 0.7 V rms at 50 kilohms
Recommended load impedance over 10 kilohms

General

Power requirements
- Rechargeable battery: 2.4 V DC
- Two LR6 (size AA) batteries: 3 V DC
- AC power adaptor (DC IN 4.5 V jack):

Where purchased	Operating voltage
European and Asian model	220V – 230V 50Hz
USA, Canadian, Central and South American model	120V 60Hz
Middle Eastren model	110V – 240V 50/60Hz
UK and Australian model	240V 50Hz
Model for other countries	100V – 240V 50/60Hz

- Sony CPM-300P mount plate and CPM-300PK mount arm for use on car battery: 4.5 V DC

Dimensions (w/h/d) (without projecting parts and controls)
Approx. 130 × 30.5 × 142 mm (5 ⅛ × 1 ¼ × 5 ⅝ in.)
Mass (without rechargeable battery)
Approx. 270 g (9.6 oz)
Operating temperature
5°C - 35°C (41°F - 95°F)

Supplied accessories

AC power adaptor (1)
Stereo headphones (1)
Connecting cord (Phono plug × 2 ↔ stereo miniplug)* (1)
Rechargeable battery BP-DM10** (1)
Carrying case*** (1)
*Not supplied with U.K. and European model, world model
**World model only
***U.K. and world model only

Design and specifications are subject to change without notice.

MICROFILM

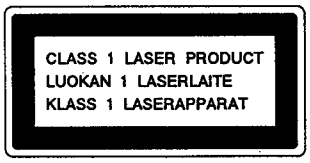
COMPACT DISC COMPACT PLAYER

SONY®

TABLE OF CONTENTS

For the customers in the U.K.

This Compact Disc player is classified as a CLASS 1 LASER product.
The CLASS 1 LASER PRODUCT label is located on the bottom exterior.



For the customers in Australia

The supply cord of the AC power adaptor cannot be replaced; if the cord is damaged, the AC power adaptor should be discarded.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Flexible Circuit Board Repairing

- Keep the temperature of the soldering iron around 270 °C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

Notes on chip component replacement

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY MARK ⚠ OR DOTTED LINE WITH MARK ⚠ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE MARQUE ⚠ SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

SECTION 2
SERVICE NOTE

NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.
During repair, pay attention to electrostatic breakdown and also use the procedure in the printed matter which is included in the repair parts.
The flexible board is easily damaged and should be handled with care.

NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

Before Replacing the Optical Pick-Up Block

Please be sure to check thoroughly the parameters as par the "Optical Pick-Up Block Checking Procedures" (Part No.: 9-960-027-11) issued separately before replacing the optical pick-up block.
Note and specifications required to check are given below.

- FOK output: IC501 ⑫ pin
  When checking FOK, remove the lead wire to disc motor.
- S curve P-to-P value: 2.0 Vp-p IC501 ⑩ pin
  When checking S curve P-to-P value, remove the lead wire to disc motor.
- Adjusted part for focus gain adjustment: RV602
- RF signal P-to-P value: 0.8 – 1.2 Vp-p
- Traverse signal P-to-P value: 1.0 – 2.0 Vp-p
- The repairing grating holder is impossible.
- Adjusted part for tracking gain adjustment: RV601

Precautions for Checking Emission of Laser Diode

Laser light of the equipment is focused by the object lens in the optical pick-up so that the light focuses on the reflection surface of the disc. Therefore, be sure to keep your eyes more then 30 cm apart from the object lens when you check the emission of laser diode.

Laser Diode Checking Methods

During normal operation of the equipment, emission of the laser diode is prohibited unless the upper panel is closed while turning ON the S808 (push switch type).
The following two checking methods for the laser diode are operable.

- **Method-1 (In the service mode or normal operation): Emission of the laser diode is visually checked.**

1. Open the upper lid.
2. Push the S808 as shown in Fig. 1.
3. Check the object lens for confirming normal emission of the laser diode. If not emitting, there is a trouble in the automatic power control circuit or the optical pick-up.
   During normal operation, the laser diode is turned ON about 2.5 seconds for focus searching.

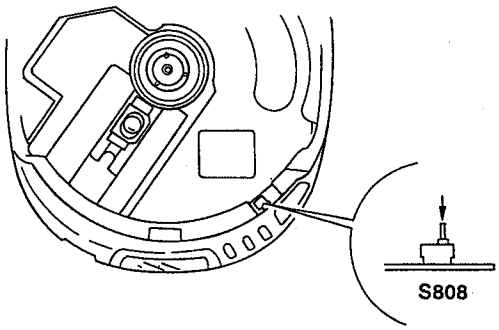

Fig. 1 Method to push the S808

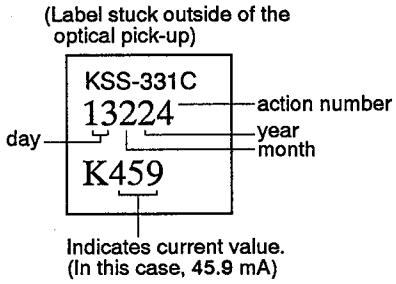
- **Method-2 (In service mode or normal operation): Check the value of current flowing in the laser diode.**

1. Remove the upper panel.
2. Read the current printed on the label attached on the rear side of the optical pick-up.



3. Connect a VTVM as shown in Fig. 2.
4. Press the ▶II key.
5. Calculate current value by the reading of the VOM.
   Reading of the tester (V) ÷ 4.7 (Ω) = current value (A)
   (Example) Reading of the VOM of 0.216 V:
   0.216 V ÷ 4.7 Ω =0.0459 (A) = 45.9 mA
6. Check that the current value is within the following range.
   - Current value of the label $^{+5}_{11}$ mA (25 ℃)
     Variation by temperature: 0.4 mA/℃
     Current increases with temperature increased.
     Current decreases with temperature decreased.

   If the current is more than the range above, there is a trouble in the automatic power control circuit or the laser diode is in deterioration.
   If less than the range, a trouble exists in the automatic power control circuit or the optical pick-up.

– MAIN BOARD – (Conductor Side)

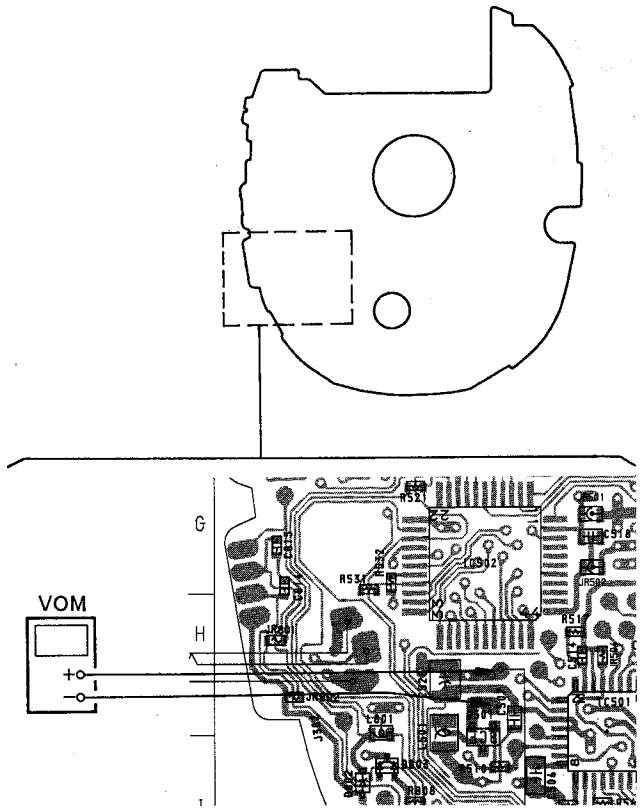


Fig. 2 VOM connecting location

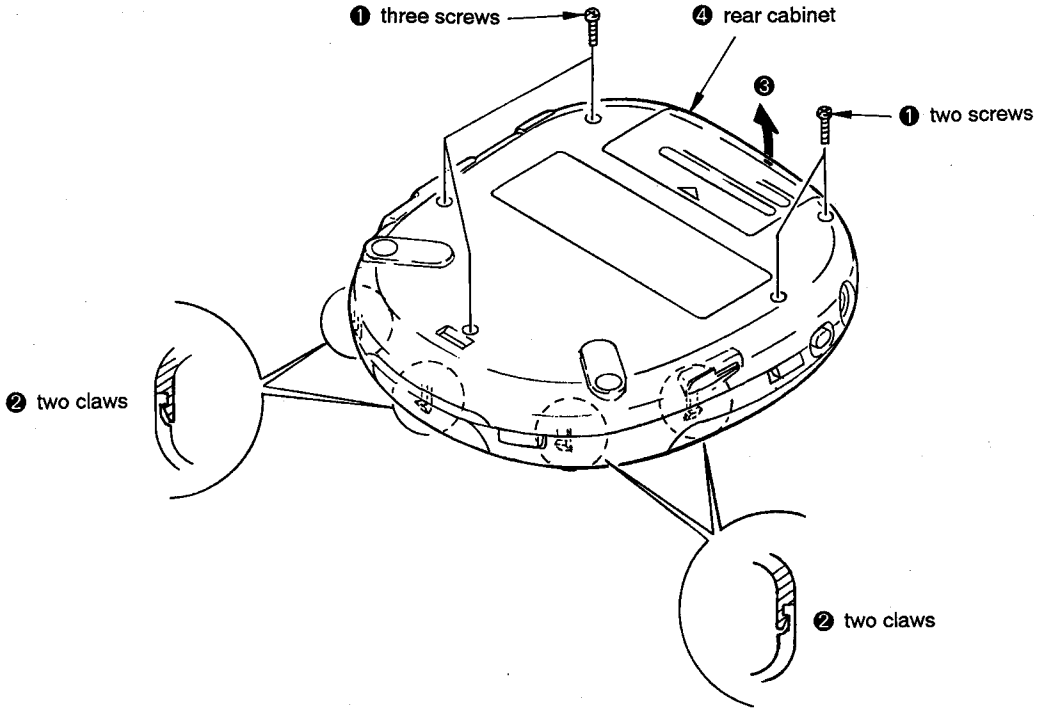
SECTION 3
DISASSEMBLY

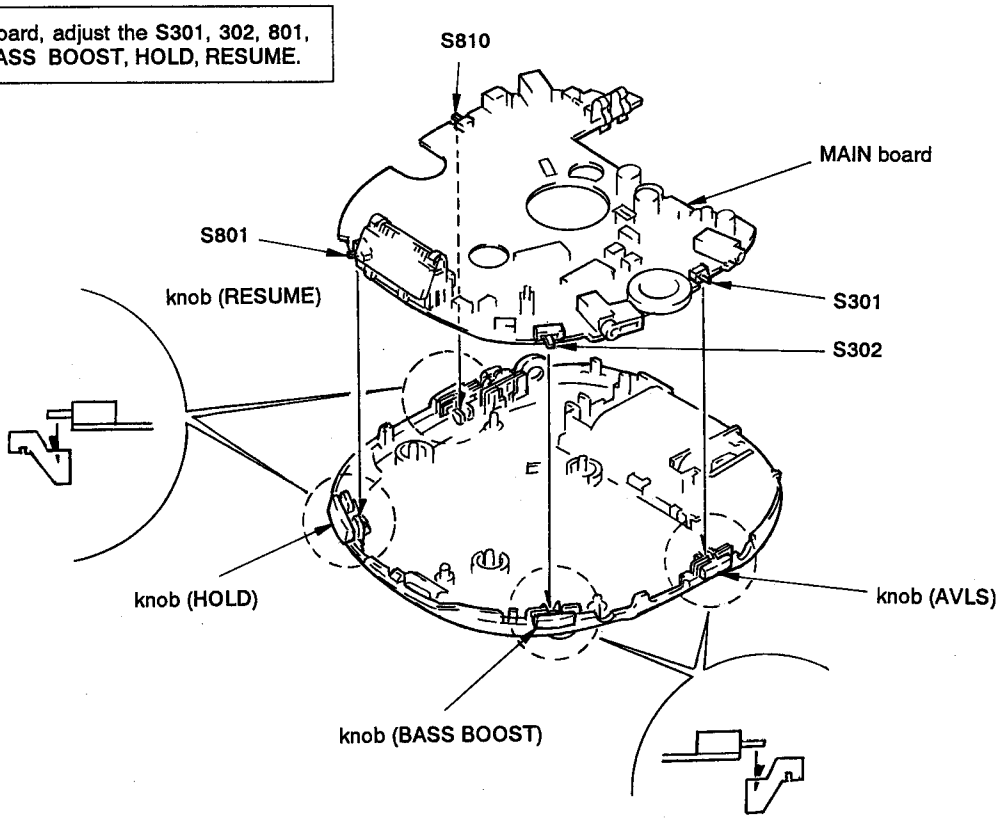
Note: Follow the disassembly procedure in the numerical order given.

REAR CABINET



INSTALLATION MAIN BOARD

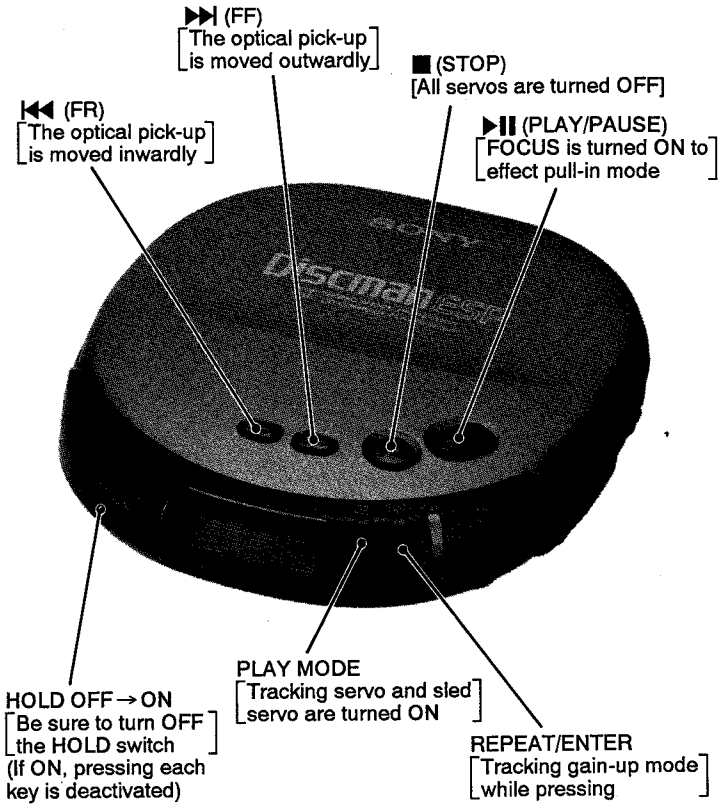
On installation MAIN board, adjust the S301, 302, 801, 810 and knob AVLS, BASS BOOST, HOLD, RESUME.



SECTION 4
SERVICE MODE

Service Mode (Service program)

The equipment is provided with a service program built in the microcomputer, like conventional models.
Service program operation methods are described in the following.



Descriptions in [ ] indicate major operations in the service mode. For more information, see Step 2.

Fig. 3 Layout of each key

• Step 1 (Service mode setting methods)

1. Turn OFF the HOLD switch with external power supply disconnected (power is not applied to the set).
2. Solder across the TEST terminals (pin ⑲ , IC801 (TEST) is grounded).
3. Connect an external power supply.

   Thus, the set is switched to the service mode.

• Step 2 (Operation in the service mode)

1. Once the service mode is effected, the LCD displays 5 indications each of which is repeatedly displayed.
   However, the following operations can be activated even if LCD indication is effected.
2. By pressing the ▶▶| or |◀◀ key, the optical pick-up is movable inwardly or outwardly. However, if this is activated, tracking servo and sled servo are turned OFF, so it can be turned ON by pressing the PLAY MODE key if required.
3. By pressing the REPEAT/ENTER key, the tracking gain-up mode becomes active.
4. By pressing the ▶|| key, focus is turned ON from focus searching while entering CLV-S (pull-in mode).
   Without disc, focus searching is repeated continuously.
5. By pressing the PLAY MODE key, tracking servo, sled servo and CLV-A (servo in PLAY) are turned ON.
6. When 4. and 5. are performed, playing begins. No muting is ON in the service mode.
7. By pressing the ■ key, all servos (focus, tracking and sled) are turned OFF. However, the disc motor revolves for a while by inertia.

• Step 3 (Resetting of service mode)

1. Be sure to disconnect the external power supply and remove the solder bridge at the TEST terminals connected before in setting.
2. The set thus becomes available for normal operation.

– MAIN BOARD – (Component Side)

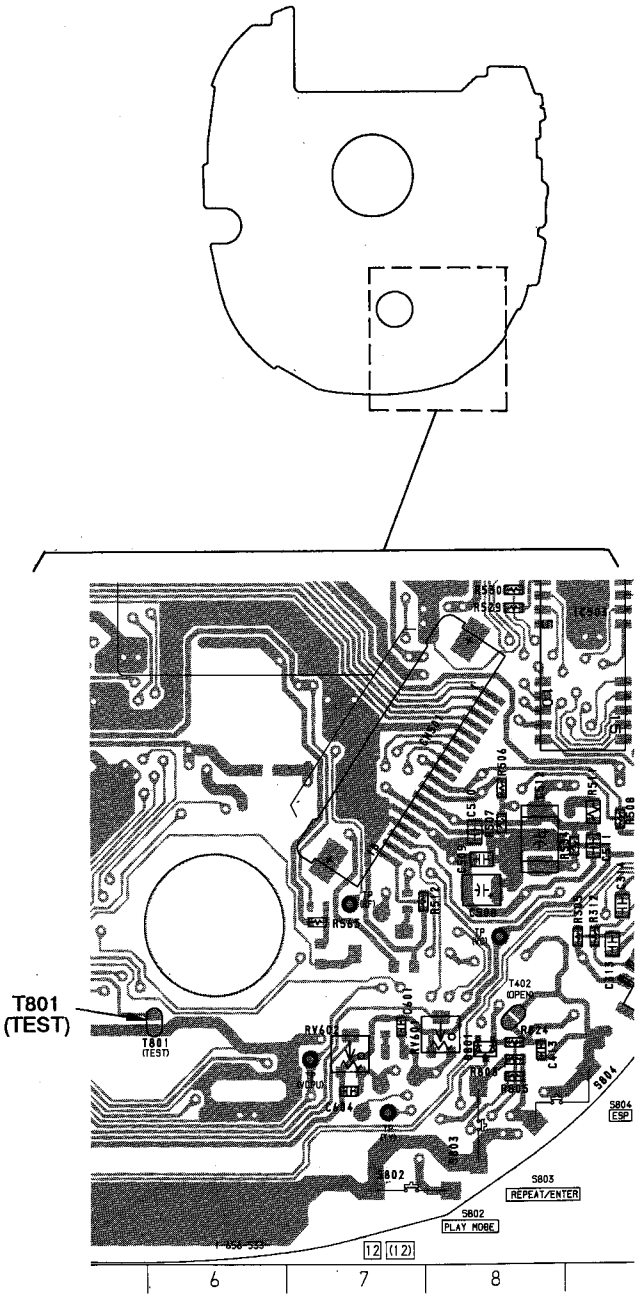


Fig. 4 Location of Test terminal

SECTION 5
ELECTRICAL ADJUSTMENTS

CD SECTION

Precautions for Adjustment

1. Before beginning adjustment, set the equipment to service mode.
   After the completion of adjustment, be sure to reset the service mode.
   For more information, see "Service Mode (service program)" on pages 5.
2. Perform adjustments in the order given.
3. Use YEDS-18 disc (Part No.: 3-702-101-01) unless otherwise indicated.
4. Power supply voltage requirement: DC4.5 V
   HOLD switch : OFF
   VOLUME switch : Minimum
   ESP switch : OFF
   BASS BOOST switch : NORM
   AVLS switch : OFF

Before Beginning Adjustment

Set the equipment to service mode (See page 6) and check the following. If there is an error, repair the equipment.

• Checking of the sled motor

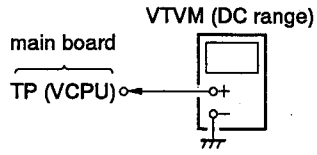
1. Open the upper panel.
2. Press the ▶▶| and |◀◀ keys and check that the optical pick-up can move smoothly without sluggishness or abnormal noise in innermost periphery → outermost periphery → innermost periphery.
   ▶▶| : The optical pick-up moves outwardly.
   |◀◀ : The optical pick-up moves inwardly.

• Checking of focus searching

1. Open the upper panel.
2. Press the ▶II key. (Focus searching operation is activated continuously.)
3. Check the object lens of the optical pick-up for smooth up/down motion without sluggishness or abnormal noise.
4. Press the ■ key.
   Check that focus searching operation is deactivated. If not, again press the ■ key slightly longer.

VDD Adjustment

Adjustment Procedure:



1. Set the equipment to service mode stop state. (See page 6.)
2. Connect the VTVM to TP (VCPU) of the main board.
3. Adjust RV401 on the main board so that the reading on VTVM goes 3.0 ± 0.05 V.
4. After the completion of adjustment, reset service mode. (See page 6.)

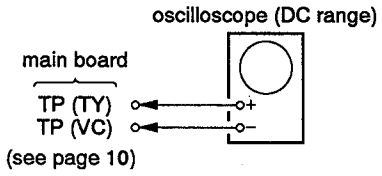
Adjustment Location: Main Board

Tracking Balance Adjustment

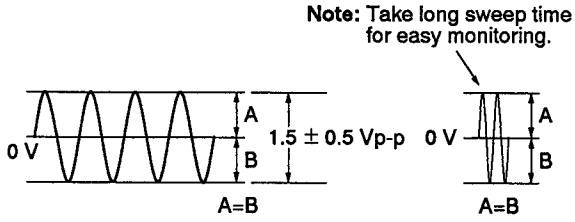
Condition:

• Hold the set in horizontal state.

Adjustment Procedure:



1. Connect the oscilloscope to TP (TY) of the main board.
2. Set the equipment to service mode stop state. (See page 6.)
3. Move the optical pick-up by pressing the ▶▶| and |◀◀ keys.
4. Put the disc (YEDS-18).
5. Press the ▶II key.
   [From focus searching, focus is turned ON while entering CLV drawing-in mode. Tracking and sled are turned OFF.]
6. Adjust RV501 so that the waveform on the oscilloscope becomes up/down symmetrical with an axis of 0 V.



7. Stop removing of the disc motor by pressing the ■ key.
8. After the completion of adjustment, reset service mode. (See page 6.)

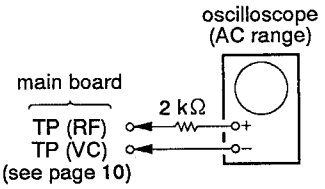
Adjustment Location: Main Board

Focus Bias Check

Condition:

- Hold the set in horizontal state.

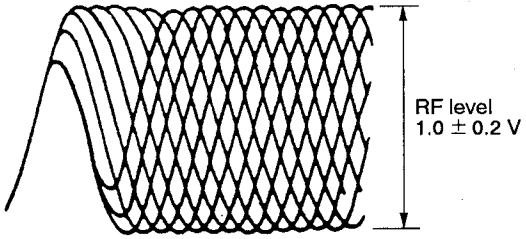
Adjustment Procedure:



1. Set the equipment to service mode stop state. (See page 6.)
2. Connect the oscilloscope to the test point TP (RF) of the main board.
3. Move the optical pick-up by pressing the ▶▶| and |◀◀ keys.
4. Put the disc (YEDS-18).
5. Put the ▶|| key.
   [From focus searching, focus is turned ON while entering CLV drawing-in mode. Tracking and sled are turned OFF.]
6. Press the PLAY MODE key. (Both tracking and sled are turned ON.)
7. Check the oscilloscope waveform is as shown below.
   A good eye pattern means that the diamond shape (◇) in the center of the waveform can be clearly distinguished.

RF SIGNAL REFERENCE WAVEFORM (EYE PATTERN)

VOLT DIV : 200 mV (With the 10:1 probe in use)
TIME DIV : 500 ns



To watch the eye pattern, set the oscilloscope to AC range and increase the vertical sensitivity of the oscilloscope for easy watching.

8. Stop revolving of the disc motor by pressing the ■ key.
9. After the completion of adjustment, reset service mode. (See page 6.)

Adjustment Location: Main Board

Focus/Tracking Gain Adjustment

A servo analayzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no probrem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up relative to mechanical noise and mechanical shock when the 2-axis device operates. However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is rased, the noise when 2-axis device operates increase.
- When gain is lowered, it is more susceptible to mechanical shock and skipping occurs more easily.

This adjustment has to be performed upon replacing any of the following parts.

- Optical pick-up
- RV602 (Focus gain VR)
- RV601 (Tracking gain VR)

Normally, be sure not to move RV602 (focus gain VR) and RV601 (tracking gain VR).

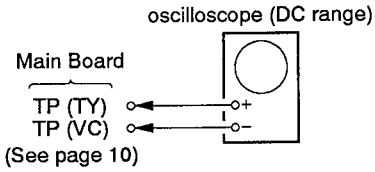
Adjustment method:

– Focus Gain Adjustment –

This adjustment is not performed.
If focus gain VR RV602 is turned, set to mechanical center.

– Tracking Gain Adjustment –

(perform at normal operation)



1. Place the optical pick-up level, horizontally. (If the optical pick-up is not level, the 2-axis device will be weighted and adjustment cannot be done.)
2. Connect the osilloscope to TP (TY) and TP (VC) on main board.
3. Set the disc (YEDS-18) and press the ▶ (▶▶|) key.
4. Turn RV601 slightly clockwise (tracking gain drops) and obtain a waveform with a fundamental wave (waveform has large waves) as in Figure 1.
5. Turn RV601 slowly counterclockwise (tracking gain rises) until the fundemental wave disappears (no large waves) as in Figure 2.
6. Set RV601 to the position about 30 ° counterclockwise form the position obtained in step 5. If RV601 contact point is more than 90 ° counterclockwise from mechanical center, tracking gain is too high. In this case, readjust from step 4.
7. Press ▶ (▶▶|) or |◀◀ key and observe the 100 track jump waveform. Check that no traverse waveform appears for both ▶ (▶▶|) or |◀◀ directions. (See Figures 3 and 4.) It is acceptable if the traverse waveform appears only now and then, but if it appears constantly, raise tracking gain slightly and check step 7 again.
8. Check that there is not abnormal amount of operation noise (white noise) from the 2-axis device. If there is, tracking gain is too high, readjust starting with step 4.

The waveforms are those measured with the oscilloscope set as shown below.

- VOLT/DIV: 50 mV
- TIME/DIV: 5 ms

- Waveform when tracking gain is lowered.
  Fundamental wave appears (large waves).

Fig. 1

- Waveform when fundamental wave disappears (no large waves).

Fig. 2

- Waveform with no traverse waveform during 100 track jump. (Brake application is smooth because of adjustment.)

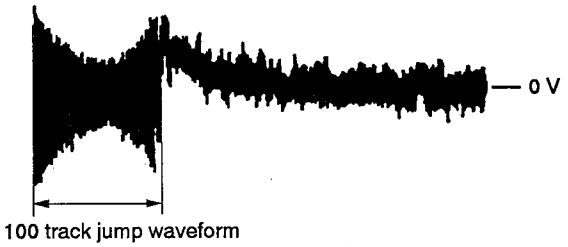


Fig. 3

- Waveform with traverse waveform during 100 track jump.
  (Brake application is poor because of adjustment.)

DIAGRAMS

6-1. IC PIN FUNCTION DESCRIPTION
MAIN BOARD IC801 CXP83412-017Q (SYSTEM CONTROL)

Pin No.	Pin Name	I/O	Function
1	HICURR	I	Overcurrent detection terminal (short detection)
2	LOBAT	I	Lo-Battery Detection terminal. "L": Lo-Battery
3		—	Not used.
4	BEEP	O	Beep Sound Pulse output terminal.
5	MDSLT	I	Input terminal for MD setting (KSM-331CAN, AX-24). "H": KSM-331CAM, "L": AX-24
6	PCON	O	Power control output terminal. "L": Power ON, "H": Power OFF
7	SQCK	O	Clock output signal to enter SUB-Q signal from IC601 (BU9312AKS)
8	SUBQ	I	SUB-Q signal input terminal (from IC601 BU9312AKS)
9	CDATA	O	Serial Data output terminal
10	YMCLK	O	Clock signal output terminal to read serial data
11	ZSENCE	I	IC502 (SM5856AIF) internal status serial input terminal
12	YMDATA	O	Serial data output terminal.
13	BUSY	I	BUSY signal input terminal. "L": Track jumping, "H": Sarvo loop ON
14	FOK	I	FOK signal input terminal. "H": OK, "L": NG
15	XRCHG	I	Rechargeable battery detection terminal. "L": Rechargaeble battery present, "H": No rechargeable battery
16	XRST	I	Reset signal input terminal
17	XHOLD	I	Hold switch input terminal. "L": HOLD ON, "H": HOLD OFF
18	XRSM	I	RESUME switch input terminal. "L": RESUME ON, "H": RESUME OFF
19	XTEST	I	TEST mode at "L", when the system is reset.
20	XLIMIT	I	Input terminal of MD inside track sensor (S901). "L": Inside track
21	C2MNT	I	C2PO signal output monitor
22	ESP	I	ESP SWITCH (Q505, 506) control terminal. "L": ESP SWITCH OFF, "H": ESP SWITCH ON
23	BAT-MNT	I	Rechargeable battery/dry cell detection terminal
24	CHGON	I	Charging on input terminal
25	RMKEY	I	A/D input terminal for headphone remote control key
26	HKEY	I	A/D input terminal for main unit keys (REPEAT/ENTER, PLAYMODE, ESP, CHARGE)
27	JKEY	I	A/D input terminal for Switch unit
28	CHGMNT	I	A/D input terminal for charging voltage monitor
29	DCINMNT	I	A/D input terminal for DC IN voltage detection. Also used for DC IN detection.
30	RESET	I	System reset input terminal. System is reset at "L"
31	OSCI	I	X801 (4.19MHz) Clock oscillator input terminal.
32	OSCO	O	X801 (4.19MHz) Clock oscillator output terminal.
33	VSS	—	Ground terminal
34	VL	—	LCD bias resistor current control terminal. (Cut off at standby)
35	VLC3	—	LCD801 bias power supply terminal
36	VLC2	—	LCD801 bias power supply terminal
37	VLC1	—	LCD801 bias power supply terminal
38	COM0	O	LCD801 common signal output terminal
39	COM1	O	LCD801 common signal output terminal
40	COM2	O	LCD801 common signal output terminal

Pin No.	Pin Name	I/O	Function
41	COM3	O	LCD801 common signal output terminal
42	SEG0	O	LCD801 segment signal output terminal
43	SEG1	O	LCD801 segment signal output terminal
44	SEG2	O	LCD801 segment signal output terminal
45	SEG3	O	LCD801 segment signal output terminal
46	SEG4	O	LCD801 segment signal output terminal
47	SEG5	O	LCD801 segment signal output terminal
48	SEG6	O	LCD801 segment signal output terminal
49	SEG7	O	LCD801 segment signal output terminal
50	SEG8	O	LCD801 segment signal output terminal
